How to Add Portfolio Code to Axys Reports

As a software consulting firm with an expertise in Axys, we often get requests to develop custom reports. One of the requests we hear most often is "Could you develop a version of the Assets Under Management report that shows portfolio code?" Adding a portfolio code to an existing report is a very easy thing to do. In this article, I will walk you through the process so that you can all become Custom Report Experts (ok, maybe not experts, but at least you'll know how to add portfolio code to a report).

Axys reports are written in RepLang, Advent's proprietary Report Writing Language. Long-time Advent User Group members will remember Andrew MacQueen's article on the subject of RepLang. I'll repeat here the same disclaimers that Andy mentioned in his article. While Advent does publish a RepLang Programmer's Guide (which they will send to you upon request), Advent Support will not answer questions about RepLang, nor will they help you debug any reports you attempt to develop. Developing your own custom reports is definitely a task best suited for those of a pioneering nature...and for those who don't mind a little trial and error.

Now, having read the disclaimers and warnings, are you ready, willing, and able to proceed? Recall that our task at hand is to add a portfolio code to our Assets Under Management Report.

Step 1 -- Make a copy of the existing Assets Under Management report.

Here's a tip for you... from the Axys Reports menu, choose the standard Assets Under Management Report (Axys Reports \rightarrow Mgmt \rightarrow Assets Under Management). The dialog for the Assets Under Management Report will appear. With the dialog box shown on the screen, look in the lower left hand corner of the Reports window. Axys displays the path and file name of the report file in the lower left hand corner of the screen. The name of the Assets Under Management report is AMAN.REP

Ar Run Assets Under Man	agement	
	Assets Under Management	×
	This report displays the market values of all portfolios within the selected group as	ОК
	of a selected date. Values are sorted by asset class.	Cancel
	Portfolio Dates1i1 💌	Consolidat <u>e</u>
	Gro <u>u</u> p Name	<u>B</u> rowse
	Date 033101	Settings
	□ G <u>r</u> aph	
	Reporting <u>C</u> urrency us	
Reading e:\axys34\rep\aman.rep.		

Using Windows Explorer, navigate to your Axys Reports directory (on my system, as shown in the example above, reports are located in the e:\axys34\rep directory). Make a copy of the AMAN.REP, and name the copy AMAN_XX.REP (where XX are your initials). Now we have a copy of the Assets Under Management report. We can make changes to the copy without endangering the original report.

Step 2 – verify that you did, indeed, make a copy of the report

In Axys Reports, choose Custom \rightarrow Any Report. In the dialog box, type in the name of your copied report (AMAN_XX, where XX are your initials)

Custom Reports		2]
Report	_ [OK	
aman_dh <u> </u>		Cancel	

When you click OK, you should see the dialog box for the standard Assets Under Management report.

	🏧 Run Report aman_dh		
		Report aman_dh	×
		This report displays the market values of all portfolios within the selected group as	ОК
		asset class.	Cancel
		Portfolio oates1i1 💌	Consolidat <u>e</u>
		Group Name	<u>B</u> rowse
		Date 033101 💌	Settings
		🗖 G <u>r</u> aph	
		Reporting <u>C</u> urrency us	
Reading e:\ax	vs34\rep\aman_dh.rep.		

Do not proceed with the next step until have successfully completed Step 1 and Step 2.

Step 3 – open your AMAN_XX.REP file in Notepad (or your favorite text editor)

Note: Do NOT use Word or WordPerfect to edit RepLang files. You must use a text editor, such as Notepad.

📓 E:\axy	vs34\rep\aman_dh.rep
1	<pre>\$_asdtxt This report displays the market values of all portfolios</pre>
2	
3	;set default chart type and format and assume no chart
4	\$_graph n
5	\$_grtype pie
2	¢ autom and

What you see when you open the file are the RepLang commands that create the Assets Under Management report.

```
Step 4 – find the line containing .#~8portmv" (line 176)
```

E:\axys34\rep\aman_dh.rep *		_ 🗆 🗵
173	bump \$portx	
174	bump \$firmx	
175	goto ee	
176	.#~8portmv\n	
477	#fiummu #fiummu #noutmu.~	

RepLang uses the period (".") to tell Axys to print. Thus, ".#~8portmv" tells Axys to print the portfolio market value. The "\n" is a carriage return, which signals Axys that this is the end of the printed line, go to the next line. We want, in this example, to display the portfolio code at the end of the line, so change .#~8portmv\n to

```
.#~8portmv $:fileo\n
```

(type in \$:fileo just after the portmy, and put two or three spaces between the two)

E:\axys34\rep\aman_dh.rep			
174	bump \$firmx		
175	goto ee		
176	.#~8portmv \$:fileo∖n		
177	#firmmv #firmmv #portmv+~		
179	miccdata ¢•filo ¥9		

We're not quite finished, but at this point you can save and run your report if you wish.

Step 5 – find the line beginning "#width #cnt 16* 25+ 16+" (line 82)

```
E:\axy$34\rep\aman_dh.rep
78 #cnt #cnt 1+
79 $leftmar $leftmar$dspace
80 goto aa
81
82 #width #cnt 16* 35+ 16+; name + asset classes + total column
83
```

Change the 25 to a 35. This will give us a little more room on the page to accommodate the port code.

All done. Save your report. Run your new report by choosing Axys Report \rightarrow Custom \rightarrow Any Report. When the Any Report dialog appears, type in the name of your report file AMAN_XX, where XX are your initials. (See step 2.)
